

Gonçalo Pereira

Software Developer · Networking · Systems Programming

goncalo.pereira.1021@gmail.com | GitHub | LinkedIn | Lisbon, Portugal

Summary

Systems-focused developer with strong experience in C, network programming, and backend development using Django. Passionate about infrastructure, performance optimization, and low-level systems design. Currently advancing skills through intensive project-based learning at 42 School.

Professional experience

Streambow

Dec/2025 - Present

Embedded Software and Network Developer Intern

- Developed and optimized embedded software for real-time data processing in C
- Implemented network communication protocols and signal handling
- Collaborated on performance tuning and debugging of low-level systems

42 Lisboa

Aug/2024 - Oct/2025

Student supervisor

- Mentored students in C programming, algorithms, and project development
- Provided guidance on debugging, code optimization, and systems design
- Facilitated workshops on network programming and Linux systems

Education

42 School

2023 - 2025

Full-Stack Software Development Program

- Rigorous project-based learning in systems programming and algorithms
- Completed core curriculum in C, C++, and full-stack development

42 School

2023 - 2025

Specialization in Systems kernel and Network Programming

- Focused projects on Linux kernel, network protocols, and performance optimization

Skills

“Languages:” C, Python, JavaScript, TypeScript, SQL

“Backend:” Django, FastAPI, PostgreSQL, Docker

“Systems:” Linux, Networking, Signal Handling, Process Management
“Tools:” Git, Docker, VS Code, Linux Command Line

Projects

Mini Shell (C) 2024
42 School Project

- Implemented bash-like shell with parsing and execution
- Built tokenizer and AST execution pipeline
- Managed processes, pipes, and signals

Transcendence (C) 2025
Django + WebSockets

- Real-time multiplayer system
- Socket-based state synchronization
- PostgreSQL backend
- Vanilla JS frontend and bootstrap css
- Dockerized deployment
